Warranty confirmation – CO₂ booster rack (EQ-00114), Central warehouse North site

Dear Sir or Madam,

Following acceptance on 15 Jul 2026, we confirm a warranty for the equipment described below on the following terms.

Equipment	Transcritical CO ₂ booster rack · equipment ID EQ-00114		
Refrigerant	R744 (CO ₂) · A1 · GWP 1	Charge	145 kg
Covered	Medium- and low-temperature compressors, gas cooler, high-pressure control valve, flash tank, rack controller and control panel, pipework and installation by JuKoTech GmbH		
Start	15 Jul 2026 (acceptance)	End	15 Jul 2028

1 Scope of the warranty

We warrant that the equipment described above is free from defects in materials, manufacture and installation. If such a defect occurs within the warranty period, we will remedy it at our discretion by repairing or replacing the affected parts – including labour and travel costs. Replaced parts do not extend the warranty period.

2 Warranty period

24 months from acceptance on 15 Jul 2026; the warranty ends on 15 Jul 2028.

3 Conditions

1. Maintenance at least once a year by a qualified refrigeration contractor with staff trained for R744, documented by maintenance reports. Service dates are scheduled and shown in the client portal.
2. The system logbook is kept in accordance with EN 378-4 (maintenance, repairs, refrigerant movements, leak checks). R744 is not a fluorinated greenhouse gas; the obligations of the F-gas Regulation (EU) 2024/573 and of the German Chemicals Climate Protection Ordinance (ChemKlimaschutzV) therefore do not apply to this system.
3. Inspections under the German Industrial Safety Regulation (BetrSichV) are carried out on time.

4. No interventions by third parties – repairs, modifications or changes to controls, software and safety settings – without our prior written consent.
5. Operation in accordance with the operating manual and within the design data; faults and alarms are reported to us without delay. Remote access under § 6 of our terms remains in place.

4 Exclusions

- Wearing parts and consumables (e.g. filter drier cores, seals, fuses, oil) unless a maintenance contract with us exists (Terms § 5 (2))
- Damage caused by improper operation, missed or late maintenance, or interventions by third parties
- External influences such as overvoltage, lightning, water, fire or mechanical damage, and fouling of the gas cooler by environmental conditions
- Failures of the client's power, water or network supply and outages of third-party cloud services (Terms § 2 (2))
- Consequential losses such as spoiled goods, to the extent permitted by law; liability for intent, gross negligence and injury to life, body or health remains unaffected

5 How to make a claim

Please report a warranty claim without delay and no later than 14 days after discovery – via the client portal as a service ticket with equipment ID EQ-00114, by e-mail to info@jukotech.gmbh or by phone on +49 (0) 162 4105959. Please state warranty no. GA-2026-114, a description of the fault with the time it occurred, the fault or alarm messages shown and, where possible, photos. An on-site contact must be reachable by phone for the visit and access to the equipment must be ensured. In the event of a CO₂ gas alarm, the safety instructions in the operating manual take precedence.

6 Statutory rights

This warranty applies in addition to your statutory rights in respect of defects and does not limit them. Our terms and conditions (as of February 2026) apply in addition.

Kind regards

JuKoTech GmbH
